

ABSTRACT OF THE DISCLOSURE

An apparatus that can perform checking terminal lock in a connector housing securely are provided. The apparatus for checking terminal lock (1) includes a main body (8), a housing set portion (19) so as to be disposed in the main body (8) to move freely in a direction of inserting and extracting a terminal, and push means (6) for pushing the housing set portion (19) in the direction of inserting the terminal. On condition that a connector housing (2) is secured in the housing set portion (19) pushed by push means (6) and the terminal connected with a wire is inserted into the connector housing (2), terminal lock is checked by pulling the wire in a direction of extracting the terminal.
